Minghai Wang

iOS Engineer

Email : heminwmh@gmail.com
Phone : 159-5713-0984
GitHub : HeminWon

Nearly 10 years of iOS development experience, responsible for delivering and iterating IoT, mobility, and AI products, with a strong focus on performance and stability.

Skills Expertise

AI-Assisted Development

- Build Skills / MCP workflows with Claude Code and Codex, codifying project standards and reusable tool capabilities; use staged orchestration, checkpoints, and quality gates to support interrupted task recovery and result verification.
- Use Hermes Agent and lark-cli to automate iOS build signing, test build distribution, and feedback email handling, applying execution constraints and human review to ensure delivery quality.
- Use AI-assisted full-stack development in company and personal projects, working with React / TypeScript frontends, Python / Go services, frontend-backend integration, and Docker containerization.

Technical Depth (iOS)

- Strong dual-stack development capability in Objective-C and Swift; able to independently design, implement, and maintain UIKit and SwiftUI/Combine scenarios.
- Systematic understanding of Runtime, RunLoop, memory management, and concurrency models (GCD / NSOperation / Swift Concurrency) for complex issue diagnosis and governance.
- Proficient in dependency management and component integration with CocoaPods and SwiftPM, ensuring stable iteration in multi-module projects.

Architecture Capability

- Able to perform state modeling and module boundary decomposition based on TCA / Redux / MVVM to support long-term evolution of complex products.
- Experienced in implementing business componentization and configuration-based delivery, enabling cross-project capability reuse and lower maintenance cost.
- Able to drive end-to-end delivery from requirement decomposition and solution design to risk identification.

Project Experience Projects

Seekee

2025.07 - Present

An AI browser for Latin America (Mexico, Brazil) and Turkey, integrating search, creation, and multimedia experiences.

Responsibilities

- Owned the architecture and UX delivery of the Super Search module (intent recognition, voice search, text-to-image/image-to-image, translation, and document parsing), bridging cloud AI capabilities to on-device interaction flows.

Technologies

- Built a unified Super Search entry with SwiftUI + Combine, and split state/business logic using a TCA feature-based approach to improve extensibility, testability, and maintainability.
- Evaluated multiple Markdown libraries for streaming output support and rendering behavior, selected swift-markdown-ui, and optimized AI summary streaming UX with SSE.
- Implemented AI assistant-driven web interactions, translating assistant commands into page clicks and scrolling through WKWebView script bridging; refreshed page context, validated browser snapshots, and deduplicated commands to handle stale context and repeated execution, returning action results and failure details to the conversation.

- Led interaction refinements on the search results page, covering skeleton states, task-level loading/error states, and improving image-generation progress algorithms and animations.
- Built AI-assisted development workflows for the team, standardizing requirements breakdown, implementation, and verification; enabled iOS test builds initiated through Feishu with automated packaging, signing, distribution, and team notifications, labeling artifacts with code versions and environments to reduce repetitive work and simplify testing.
- Built a user feedback assistant to classify feedback emails, respond to common login issues, and summarize payment and other complex issues for team review, reducing manual triage.

Honda RoadSync 2024.08 - 2024.12

Honda RoadSync is a smart mobility app launched by Honda to support its motorcycle lineup, providing convenient and safe digital services for riders. Via Bluetooth connection between phone and motorcycle, users can operate navigation, calls, music playback, and notifications while staying focused on riding.

Responsibilities

- Led localization delivery of Honda RoadSync as the technical PM and handed over to Honda Japan R&D.

Technologies

- Used classic Bluetooth to integrate cluster features like navigation, VoIP, music, volume, and weather; supported handlebar four-way switch control and voice prompts.
- Built with SwiftUI and Combine; used Redux for state management and event dispatch.

Smart Living & Smart Mobility OEM Suite 2019.05 - 2024.08

Tuya provides one-stop OEM app building and management. Based on official templates, OEM apps offer easy UI customization and allow clients to configure brand settings.

Responsibilities

- Iterated on Smart Living OEM features, maintaining home/member management, device/room lists, pairing, and message center.
- Independently led Smart Mobility OEM iterations, including BLE+X device control, geofencing, third-party map navigation, passive unlocking, and Siri control.

Technologies

- OEM development model with configuration files; apps generated on demand after IoT platform configuration, with code pruning support.
- Supported multiple pairing methods: EZ (Wi-Fi quick connect), AP (hotspot), NB-IoT, Bluetooth, QR code, etc.
- Delivered an SDK that digitizes physical entities via a Thing Model, abstracting device instances with attributes, action events, and services, using MQTT for control and state monitoring.
- Wide protocol support: Matter, Zigbee, BLE, Sigmesh, Beacon, Cat.1, etc.
- Enabled Tuya devices for Home Assistant so users can control Tuya IoT devices within Home Assistant.

Work Experience Experience

Renren Video (Moli (Shanghai) Information Technology Co., Ltd.) · iOS Engineer 2025.07 - Present

Renren Video is a comprehensive video platform focused on overseas Chinese users, offering rich content and high-quality user experience, and aiming to be the preferred video entertainment platform for this audience.

- Role: Responsible for iOS development and maintenance of the subsidiary product, Seekee AI Browser.

Tuya Smart (Hangzhou Tuya Information Technology Co., Ltd.) · iOS Engineer 2019.04 - 2024.12

Tuya Smart (NYSE: TUYA; HKEX: 2391) is a leading global cloud platform provider, building a developer ecosystem to empower smart solutions.

- Role: Smart Living & OEM iteration and customized client support.

DiDi Chuxing (Hangzhou Kuaidi Technology Co., Ltd.) · iOS Engineer 2018.03 - 2019.04

DiDi Chuxing is a leading global mobility platform serving more than 450 million users across taxi, premium, express, rideshare, luxury, bus, shuttle, designated driver, rentals, enterprise services, and bike sharing.

- Role: Passenger app designated driver line, Project Dawn (internal) and DoraemonKit (open source) backend.

Flush (Zhejiang Hexin Tonghuashun Network Information Co., Ltd.) · iOS Engineer 2016.03 - 2018.03

A leading Chinese stock-trading app, founded in 1994 and listed on the Shenzhen Stock Exchange in 2009, serving over 300 million users.

- Role: Market business group, Finance Master (enterprise) client, and UI automation testing.

Self Evaluation About

- I hope to take ownership of architecture and performance governance in complex products, improving delivery quality and engineering efficiency.
- I focus on translating requirements into strong product experiences and driving business outcomes with solid engineering solutions.

Education Education

Hangzhou Dianzi University 2012.09 - 2016.06

School of Electronics and Information · IC Design and Integrated Systems · Bachelor's
