8 years of iOS development experience, leading product delivery and continuous iteration in smart living and mobility domains, covering Bluetooth/BLE, IoT device control, map navigation, and voice assistants; proficient in Swift/SwiftUI, Combine, and modular architectures, with strong cross-team collaboration and project execution.

Education

Hangzhou Dianzi University

2012.09 - 2016.06

School of Electronics and Information · Bachelor's

IC Design and Integrated Systems

Work Experience

Tuya Smart (Hangzhou Tuya Information Technology Co., Ltd.)

2019.04 - 2024.12

iOS Engineer

Tuya Smart (NYSE: TUYA; HKEX: 2391) is a leading global cloud platform provider, building a developer ecosystem to empower smart solutions.

- Role: Smart Living & OEM iteration and customized client support.

DiDi Chuxing (Hangzhou Kuaidi Technology Co., Ltd.)

2018.03 - 2019.04

iOS Engineer

DiDi Chuxing is a leading global mobility platform serving more than 450 million users across taxi, premium, express, rideshare, luxury, bus, shuttle, designated driver, rentals, enterprise services, and bike sharing.

- Role: Passenger app designated driver line, Project Dawn (internal) and DoraemonKit (open source) backend.

Flush (Zhejiang Hexin Tonghuashun Network Information Co., Ltd.)

2016.03 - 2018.03

iOS Engineer

A leading Chinese stock-trading app, founded in 1994 and listed on the Shenzhen Stock Exchange in 2009, serving over 300 million users.

- Role: Market business group, Finance Master (enterprise) client, and UI automation testing.

Project Experience

Honda RoadSync

2024.08 - 2024.12

Honda RoadSync is a smart mobility app launched by Honda to support its motorcycle lineup, providing convenient and safe digital services for riders. Via Bluetooth connection between phone and motorcycle, users can operate navigation, calls, music playback, and notifications while staying focused on riding.

Responsibilities

- Led localization delivery of Honda RoadSync as the technical PM and handed over to Honda Japan R&D.

Technologies

- Used classic Bluetooth to integrate cluster features like navigation, VoIP, music, volume, and weather; supported handlebar four-way switch control and voice prompts.
- Built with SwiftUI and Combine; used Redux for state management and event dispatch.

Tuya provides one-stop OEM app building and management. Based on official templates, OEM apps offer easy UI customization and allow clients to configure brand settings.

Responsibilities

- Iterated on Smart Living OEM features, maintaining home/member management, device/room lists, pairing, and message center.
- Independently led Smart Mobility OEM iterations, including BLE+X device control, geofencing, third-party map navigation, passive unlocking, and Siri control.

Technologies

- OEM development model with configuration files; apps generated on demand after IoT platform configuration, with code pruning support.
- Supported multiple pairing methods: EZ (Wi-Fi quick connect), AP (hotspot), NB-IoT, Bluetooth, QR code, etc.
- Delivered an SDK that digitizes physical entities via a Thing Model, abstracting device instances with attributes, action events, and services, using MQTT for control and state monitoring.
- Wide protocol support: Matter, Zigbee, BLE, Sigmesh, Beacon, Cat.1, etc.
- Enabled Tuya devices for Home Assistant so users can control Tuya IoT devices within Home Assistant.

DiDi Chuxing (Passenger)

2018.03 - 2019.04

DiDi Chuxing is a global smart mobility platform. The passenger app is a core entry point providing convenient, efficient transportation services.

Responsibilities

- Owned feature iterations and maintenance for the designated driver line; contributed to shared platform components.
- Refactored business logic into independent libraries to improve autonomy and speed up daily builds.
- Layered the designated driver domain and extracted a core module to enable rapid reuse.

Technologies

- Used MVCS and MVVM with scenario templating, componentization, and product configuration to unify business logic across premium/express/specialized/driver services and build a unified executive-car platform.
- Unified the payment SDK and managed business plugins via a plugin framework; provided default implementations and extensibility for client differences.
- Provided a unified ApolloSDK for canary releases, AB testing, and fast city rollout.

Flush (Tonghuashun)

2016.03 - 2018.03

Real-time global market quotes for A/H/U.S. stocks, curated market news, and online trading for 90% of brokerages.

Responsibilities

- Built a Jenkins-based auto-packaging platform for the Finance Master project, improving delivery efficiency.
- Led menu feature development to switch test and pre-release environments, reducing repackaging time.
- Maintained market modules and delivered features such as stock alerts and screenshot editing/sharing.
- Reworked the market list to mitigate offscreen rendering costs; refactored third-party sharing for better extensibility.
- Built a UI automation testing platform for regression traversal to reduce production bugs, and created a mobile performance tracking tool to monitor version-level performance over time.

Self Evaluation

About

- I hope the next role offers growth opportunities and technical challenges, with strong emphasis on code quality and knowledge sharing.
- Better understand user needs so technology truly serves the product, and deliver outstanding products.
